CONGRESS OF THE UNITED STATES
Office of Technology Assessment
Washington, D. C. 20510
OTA works directly with a providing them with detailed responding to specific questions.

OTA’s multidisciplinary assessments. It draws extensive resources of the private research organizations, industry p. 8).

Excerpt From Technol. Public Law 93-644, Oct 1
“FINDINGS AND DE
SEC. 2. The Congress hereby finds and declares that: (a) As technology continues to change and develop: (1) large and growing in scale; and (2) increasingly extensive, pervasive, and adverse, on the natural and social environment. (b) Therefore, it is essential that, among other things, the Congress be informed of the practical consequences of technological applications and changes in determination of public policies.”
Office of Technology Assessment (OTA)

WHAT OTA IS

OTA is a nonpartisan analytical support agency that serves the United States Congress by providing objective analyses of major public policy issues related to scientific and technological change. (See pg. 5)

WHAT OTA DOES

OTA works directly with and for the committees of Congress, providing them with detailed analyses of technological issues and responding to specific questions based on that analysis. (See p. 7)

HOW OTA WORKS

OTA's multidisciplinary staff plans, directs, and drafts all assessments. It draws extensively on the broad technical and professional resources of the private sector, including universities, research organizations, industry, and public interest groups. (See p. 8).

Excerpt From Technology Assessment Act of 1972
Public Law 92-484, 92d Congress, H.R. 10243
October 13, 1972

"FINDINGS AND DECLARATION OF PURPOSE

SEC. 2. The Congress hereby finds and declares that:
(a) As technology continues to change and expand rapidly, its applications are—
(1) large and growing in scale; and
(2) increasingly extensive, pervasive, and critical in their impact, beneficial and adverse, on the natural and social environment.
(b) Therefore, it is essential that, to the fullest extent possible, the consequences of technological applications be anticipated, understood, and considered in determination of public policy on existing and emerging national problems."

The Congressional Board

A 12-member bipartisan con Representatives—governs OTA. President pro tempore of the Senate traditionally, the Chairman is a man of the other. (Current Board cover.)

The Council

An Advisory Council of 10 people, technology, and education, appoints OTA assessments and other matters United States and the Director of the Library of Congress are also.

The Director

The Director is appointed by a member. He has full authority and using OTA's resources according

The Staff

OTA has a permanent staff span the spectrum of physical, life and medicine.
WHAT OTA IS

The Organization

The Congressional Board

A 12-member bipartisan congressional Board—six Senators and six Representatives—governs OTA. Board Members are appointed by the President pro tempore of the Senate and the Speaker of the House, respectively. A Chairman and Vice Chairman are elected by the Board. These posts alternate between the Senate and House in succeeding Congresses. Traditionally, the Chairman is a member of one major party; the Vice Chairman of the other. (Current Board Members are listed on the inside front cover.)

The Council

An Advisory Council of 10 public members eminent in science, technology, and education, appointed by the Board, advises the Board on OTA assessments and other matters. The Comptroller General of the United States and the Director of the Congressional Research Service of the Library of Congress are also members.

The Director

The Director is appointed by the Board and serves as a nonvoting member. He has full authority and responsibility for organizing and managing OTA's resources according to Board policies.

The Staff

OTA has a permanent staff of 95 to 100 professionals whose skills span the spectrum of physical, life, and social sciences; engineering; law; and medicine.
OTA's job is to provide congressional committees with objective analyses of the emerging, difficult, and often highly technical issues of the late 20th century. It explores complex issues involving science and technology, helping Congress to resolve uncertainties and conflicting claims, identifying alternative policy options, and providing foresight or early alert to new developments which could have important implications for future Federal policy. OTA does not advocate particular policies or actions, but points out their pros and cons and sorts out the facts.

Technology Issues

A growing number of major issues of congressional concern—agriculture, biotechnology, energy, environment, health, national security, natural resources, telecommunications, transportation, water, world trade—are complex, highly technical, involve long-range impacts, and contain social and economic factors.

Take, for example, the issue of long-term energy sources. After three decades of lessening reliance on coal, growing dependence on gas and oil, and continued major public investment in nuclear power, our Nation still has no definitive plan of action to provide a transition over the next several decades to an energy use and supply system that is economically sensible, environmentally acceptable, and sustainable over a long period of time. The security and economic future of our Nation probably depend more heavily on energy than on any single resource. In making decisions on national energy policy, Congress must examine and assess an intricate array of technical realities and uncertainties, scientific knowledge, economic tradeoffs, social values and perceptions of risk and equity, and political judgments and tradeoffs.

During the 1960s, Congress found that failure to consider the complexity, cost, breadth, and long-term implications of technology led to policy decisions that were sometimes inappropriate, ineffective, or worse. In deciding such issues, Congress was all too often forced to rely on inadequate, conflicting, and biased information from outside sources. In 1972, after a long series of studies and hearings, Congress authorized the establishment of OTA as a congressional source of information and analysis that is nonpartisan, expert, objective, and anticipatory.

The Board decides whether an assessment is to be undertaken. First, the OTA staff determines the technical and research requirements for a successful study and estimates the resources and time it might require. The Board decides whether to proceed. A formal proposal to the Board initiates the study phase. The bulk of OTA's work each year may take one to two years to complete and current work to provide a timely response to committee requests for assessments.

What OTA does not advocate particular policies or actions, but points out their pros and cons and sorts out the facts. OTA provides advice to committees on the basis of its ongoing assessments. The Board decides whether an assessment is to be undertaken. First, the OTA staff determines the technical and research requirements for a successful study and estimates the resources and time it might require. The Board decides whether to proceed. A formal proposal to the Board initiates the study phase. The bulk of OTA's work each year may take one to two years to complete and current work to provide a timely response to committee requests for assessments.
committees with objective analyses of the late-breaking science and technology, and conflicting claims, identify-foresight or early alert to new implications for future Federal policies or actions, but points acts.

WHAT OTA DOES

Assessment Requests and Approvals

According to the OTA act, requests for OTA assessments may be made by the chairman of any congressional committee acting for himself, or on behalf of a ranking minority member, or a majority of committee members; by the OTA Board; or by the OTA Director, in consultation with the Board.

The Board decides whether or not OTA will undertake a requested assessment. First, the OTA staff analyzes the request to determine what resources and time it might require and what modifications it might need to suit OTA's resources and congressional needs. The staff then presents a formal proposal to the Board, which makes the final decision.

OTA Studies and Proposals

The bulk of OTA's work centers on comprehensive assessments that may take one to two years to complete. OTA also draws upon its studies and current work to provide a variety of responses to meet immediate congressional needs, such as briefings, testimony and interim reports. These timely responses to committees are based on data in current and past assessments.

In order to assure that OTA's work is responsive to the congressional agenda, OTA provides advice to committee members and staff, presents testimony at hearings, conducts workshops, and provides interim reports based on its ongoing assessments. This close working relationship with committees is the foundation on which the unique value of OTA as a resource to the Congress is built.
HOW OTA WORKS

Program Teams

The OTA staff consists of skilled professionals with advanced training primarily in the physical, life, and social sciences, and engineering. The OTA staff is organized into nine program areas: energy and materials; international security and commerce; industry, technology, and employment; food and renewable resources; health; biological applications; communication and information technologies; oceans and environment; and science, transportation, and innovation.

These program teams conduct specific assessments, working closely with congressional committee staff. The team develops the overall study plan, performs research, identifies, enlists, and works with the appropriate contractors and consultants, analyzes and integrates their work, and develops the final report. In cases where the subject spans more than one program, a team of professionals from these areas is created.

Panels

Throughout each project, OTA uses advisory panels of experts on a particular subject as a way of ensuring that reports are objective, fair, and authoritative. Such panels include not only distinguished scientists and engineers, but also affected and interested parties from labor, industry, the academic community, public interest groups, State and local government, and the citizenry at large. These panels help to shape OTA studies by defining them initially, critiquing them while in process, and reviewing the reports before they are released.

Private Sector Involvement

OTA depends on the private sector as a source of expertise and perspectives while an assessment is in progress. Contractors and consultants are drawn from industry, universities, private research organizations, and public interest groups.

OTA also works to ensure that the views of the public are fairly reflected in its assessments. It involves the public in many ways—through advisory panels, workshops, surveys, and formal and informal public meetings.
professionals with advanced training in sciences, and engineering. Areas: energy and materials; biological applications; and environment. These interactions help OTA to identify and take into account contrasts between the perspectives of technically trained and lay citizens.

Release of Reports

After a completed assessment has been approved by the Director, copies of the formal report are sent to the Technology Assessment Board for its review and authorization for release. If a majority of the Board does not object, the report is forwarded to the requesting committee(s), summaries are sent to all Members of Congress, and then the report is released to the public. OTA assessments are published by the Government Printing Office and are frequently reprinted by commercial publishers.

Research Coordination

OTA works with the other congressional support agencies—the Congressional Budget Office, the Congressional Research Service of the Library of Congress, and the General Accounting Office—in an interagency Research Notification System. Its purpose is to coordinate activities and exchange information to avoid duplication of effort. Representatives of each organization meet regularly, and biweekly status reports are published in a central directory of congressional research activity.

Similarly, OTA stays in touch not only with the published work of analysts and researchers in Federal executive and legislative branch agencies and throughout the country, but also with their current activities. Thus, OTA can frequently obtain valuable unpublished information.
SELECTED PUBLICATIONS
OF INTEREST

ENERGY, MATERIALS, AND INTERNATIONAL SECURITY DIVISION

U.S. Natural Gas Availability: Gas Supply Through the Year 2000—Analyzes the key technical and physical parameters that determine the resource base, production rates, and costs of all categories of below-ground natural gas and assesses future technology trends and R&D needs that may accelerate these trends.

*U.S. Vulnerability to an Oil Import Curtailment: The Oil Replacement Curtailment—Examines the opportunities and problems that characterize various technical responses that could supplement the Strategic Petroleum Reserve to meet a disruption in imported oil.

Environmental Protection in the Federal Coal Leasing Program—Outlines DOI’s prelease environmental assessment and planning process, describes how that process was implemented in the five Western coal regions, discusses the issues that have been raised with respect to the adequacy of that process and its implementation and reviews policy options that would allow leasing to proceed in an environmentally compatible manner.

*Nuclear Power in an Age of Uncertainty—Examines the future of nuclear power and describes the current technological, economic, financial, public perception, and regulatory problems facing the domestic industry.

*Industrial and Commercial Cogeneration—Examines the technical features of commercial and advanced cogeneration technologies, including requirements for connecting cogenerations to the utility grid and technologies for storing thermal or electrical energy.

*Industrial Energy Use—Examines four American industries (pulp and paper, steel, petroleum refining, and organic chemical production).

*Increased Automobile Fuel Efficiency and Synthetic Fuels: Alternatives for Reducing Oil Imports—Assesses increased automobile fuel efficiency and synthetic fuels production with respect to their potential to reduce conventional oil consumption, and their costs and impacts.

*Energy Efficiency of Buildings in Cities—Focuses on the interaction of technology and policy for new and existing buildings in U.S. cities for the next two decades.

*Solar Power Satellite Systems—Assesses the potential advantages, shortcomings, and impacts of solar satellite systems.

Nuclear Powerplant Standardization—Provides the essential background material for a broad understanding of the nuclear industry, its institutions and their relationship to standardization.

The Future of Liquefied Natural Gas Imports—Evaluates projected U.S. demand, global availability, cost and financing, and security of foreign supplies.

*Energy From Biological Processes—Evaluates the energy potential of plant and animal matter.

Residential Energy Conservation—Examines the prospects of existing and new technologies for reducing energy consumption in homes.

The Direct Use of Coal: Prospects and Problems of Production and Combustion—Assesses the prospects as well as the environmental, health, safety, and other problems of mining and burning significantly more coal than at present.

Application of Solar Technology to Today’s Energy Needs—Evaluates the economic, technical, and environmental impacts of solar energy systems located at the point of use.

*A Technology Assessment of Coal Slurry Pipelines—Compares the cost of transporting coal by slurry pipelines to rail for certain routes.

*Technologies to Reduce U.S. Materials Import Vulnerability—Identifies major changes in materials vulnerability that are likely to occur over the next 25 years because of advances in such fields as electronics, energy, and transportation.

*Wood Use: U.S. Competitiveness and Technology—Surveys forest products industry, domestic demand, and world markets.

*Technologies and Management Strategies for Hazardous Waste Control—Assesses the criteria for defining hazardous waste and for judging the relative health and environmental hazards of a given waste.

*An Assessment of Development and Production Potential of Federal Coal Leases—Analyzes all mining activities, examines present and potential development value, estimates revenues to the Federal Government and deep-mining feasibility on Federal leases.

*Summary available.

HEALTH AND LIFE SCIENCES DIVISION

*Technology and Aging in America—Assesses the employment, housing and public services, and it
*Commercial Biotechnology: An International An applied to industries involved in agriculture, pha
*The Role of Genetic Testing in the Prevention of Oc state of the art.
*Impacts of Applied Genetics: Micro-Organisms, and molecular genetic technologies to micro-orga
*World Population and Fertility Planning Technolog and programs view planned birth technologies, anc world population growth in the last 20 years.

*Technologies to Sustain Tropical Forest Resource States and the world.

*Summary available.
*Technology and Steel Industry Competitiveness—Assesses how and when new technology can improve the international competitiveness of the U.S. steel industry.

*An Assessment of Oil Shale Technologies—Assesses the status and potential of technologies for the development of oil shale resources.

Technical Options for Conservation of Metals: Case Studies of Selected Metals and Products—Explores the kinds and amounts of waste that occur in our use of eight critical metals.

Materials and Energy From Municipal Waste: Resource Recovery and Recycling From Municipal Solid Waste and Beverage Container Deposit Legislation—Examines present and potential technologies for producing energy and recovering resources from municipal solid waste.

Management of Fuel and Nonfuel Minerals in Federal Land—Assesses Federal laws and practices that govern the exploration, development, and production of fuel and nonfuel minerals onshore Federal lands.

*Technology Transfer to the Middle East—Focuses on international competition in Middle East technology trade during the past decade and includes an analysis of future prospects for technology trade.

*International Competitiveness in Electronics—Examines those factors contributing to the competitiveness of the electronics industry that could most readily be affected by U.S. Government policy.

*Technology and Soviet Energy Availability—Analyzes and identifies various levels of availability of U.S. and other Western energy technology and examines the impact on Soviet energy production to 1990.

MX Missile Basing—Assesses the technical feasibility, strategic utility, cost, impact on the region, and future consequences of various MX-basing modes.

U.S. Industrial Competitiveness: A Comparison of Steel, Electronics, and Automobiles—Extends OTA’s efforts in the study of industrial competitiveness to a cross-industry comparison.

Taggants in Explosives—Assesses the technical feasibility, safety ramifications, costs, and law enforcement utility of a proposal to require that commercial explosives be manufactured with “identification and detection taggants.”

Technology and East-West Trade—Examines the economic, military, and political implications of technology transfer to the Communist world.

*The Effects of Nuclear War—Examines the social, economic, political, and health effects of various levels of nuclear attacks on the United States and the Soviet Union.

Remote Sensing and the Private Sector: Issues for Discussion: A Technical Memorandum—Focuses on appropriate requirements and conditions for private sector ownership of the U.S. land remote-sensing system.

Nuclear Industrial Waste: Classifying for Hazard Management: A Technical Memorandum—Reviews the nature and magnitude of hazardous waste disposal.

World Petroleum Availability: A Technical Memorandum—Examines prospects for world oil supplies and production during the next two decades.

Gasohol: A Technical Memorandum—Discusses the technology and economics of gasohol production.

HEALTH AND LIFE SCIENCES DIVISION

*Technology and Aging in America—Assesses the impact of technology in four areas—health and life sciences, employment, housing and public services, and international aspect.

Commercial Biotechnology: An International Analysis—Describes the state of the art of biotechnology as applied to industries involved in agriculture, pharmaceuticals, and chemicals.

The Role of Genetic Testing in the Prevention of Occupational Disease—Examines questions on the technological state of the art.

Impacts of Applied Genetics: Micro-Organisms, Plants, and Animals—Examines the application of classical and molecular genetic technologies to micro-organisms, plants, and animals.

World Population and Fertility Planning Technologies: The Next 20 Years—Examines how Government policies and programs view planned birth technologies, and how new international population assistance has changed world population growth in the last 20 years.

Technologies to Sustain Tropical Forest Resources—Examines the importance of tropical forests to the United States and the world.

*Summary available.
*Water-Related Technologies for Sustainable Agriculture in U.S. Arid and Semiarid Lands—Focuses on U.S. and foreign experience.

*Plants: The Potentials for Extracting Protein, Medicines, and Other Useful Chemicals—Identifies technological opportunities and constraints for commercially developing protein, pharmaceuticals, chemicals, and other associated extracts from plants.

*Impacts of Technology on U.S. Cropland and Rangeland Productivity—Examines the effects of presently used technologies on the capacity of cropland and rangeland resource base to sustain high levels of production.

*U.S. Food and Agricultural Research—Analyzes the scientific base for establishing national, regional, and local research problems and the role of Federal, State, and private institutions in solving these problems.

Environmental Contaminants in Food—Discusses the different types and sources of chemical and radioactive contaminants in food.

*Pest Management Strategies in Crop Protection—Reviews the array of tactics currently used to control agricultural pests.

Open Shelf-Life Dating of Food—Addresses the practicality, benefits, and costs of open shelf-life dating of food products.

Drugs in Livestock Feed—Analyzes the use of antibacterial and other drugs to promote growth and prevent disease in livestock.

Nutrition Research Alternatives—Evaluates alternative strategies to redirect Federal research toward examining the relationship between nutrition and the changing health problems of Americans.

Organizing and Financing Basic Research To Increase Food Production—Evaluates alternative methods for organizing and funding basic research in the biological sciences.

Perspectives on Federal Retail Food Grading—Assesses the capability of the current food grading system used by the Federal Government.

Postmarketing Surveillance of Prescription Drugs—Describes the drug approval process, the history and objectives of postmarketing surveillance, the methods employed to accomplish it, and current activities in postmarketing surveillance.

*Blood Policy and Technology—Assesses technologies affecting the availability, users, and risks of blood. To be assessed: blood collection, processing, storage, and distribution; identification, isolation, production, and use of blood components; blood substitutes; and identification and prevention of blood-transmitted diseases and other risks.

*Federal Policies and the Medical Devices Industry—Provides information about the nature of firms that manufacture medical technologies, conducts cases studies of selected medical devices, and examines present and proposed Federal policies that influence the medical devices industry and the cost and effectiveness of medical devices.

*Medical Technology and the Costs of the Medicare Program—Examines the range of policies to contain Medicare costs and impacts on the adoption and use of medical technology.

Update of Federal Activities Regarding the Use of Pneumococcal Vaccine: A Technical Memorandum—Provides an update on Federal policies related to key area of vaccine and immunization activities.

*Medical Technology Under Proposals To Increase Competition in Health Care—Analyzes the implications for medical technology of two categories of proposals to increase competition.

MEDLARS and Health Information Policy—Analyzes the arguments for and against the National Library of Medicine's creation and dissemination of health-related bibliographic information.

*Strategies for Medical Technology Assessment—Examines the appropriateness and validity of existing assessment methods, such as controlled clinical trials, epidemiological studies, and consensus exercises.

*Technology and Handicapped People—Provides information on general issues, such as the state of the art of evaluating efficacy, safety, and cost.

Cost-Effectiveness Analysis of Inactivated Influenza Vaccine—Examines the cost effectiveness of influenza vaccine.

*Assessment of Technologies for Determining Cancer Risks From the Environment—Examines four major issues: estimates of the percentage of cancer due to environmental exposure, technologies used to test for carcinogenicity, methods used for extrapolating data from animals to humans, and regulatory pathways for controlling carcinogens.

The Implications of Cost-Effectiveness Analysis of Medical Technology—Analyzes the feasibility, implications, and usefulness of cost-effectiveness analysis and cost-benefit analysis in health care decisionmaking.

Forecasts of Physician Supply and Requirements—Analyzes the assumptions, methods, and conclusions of the technologies for forecasting both the need for and supply of physicians by specialty and geographical distribution.

A Review of Selected Federal Vaccine and Immunization Policies Based on Case Studies of Pneumococcal Vaccine—Analyzes Federal policies related to four areas of vaccine and immunization activities.

Selected Topics in Federal Health Statistics—E offers alternatives for their effective manager Assessing the Efficacy and Safety of Medical 1 Back and safety of medical technologies before Policy Implications of the Computed Tomograph planning, use, and financing arising from the v Policy Implications of Medical Information Syst formation systems.

Selected Topics in Federal Health Statistics—Examines data systems used in Federal health programs and offers alternatives for their effective management.

Assessing the Efficacy and Safety of Medical Technologies—Evaluates the need for assessments of the efficacy and safety of medical technologies before they go into widespread use.

Policy Implications of the Computed Tomography (CT) Scanner—Analyzes issues such as efficacy, health planning, use, and financing arising from the widespread adoption of the CT scanner.

Policy Implications of Medical Information Systems—Examines the potential of computer-based medical information systems.

Cancer Testing Technology and Saccharin—Assesses the capacity of current testing methodology to predict the carcinogenic potential of chemicals consumed by humans.

Development of Medical Technology: Opportunities for Assessment—Examines the need for assessing the potential social impacts of emerging medical technologies while they are being developed.

Africa Tomorrow: Issues in Technology, Agriculture, and U.S. Foreign Aid: A Technical Memorandum—Defines various issues in technology development, technology transfer, and technical assistance which could be considered as an effective strategy to assist African countries in enhancing their food production.

Agricultural Postharvest Technology and Marketing Economics Research: A Technical Memorandum—Evaluates methods in identifying priority research areas, the adequacy of present basic and applied research efforts, and public policy options.

Diagnosis Related Groups (DRGs) and the Medicare Program: Implications for Medical Technology: A Technical Memorandum—Focuses on the increase in the use of new and existing medical technologies with specific emphasis on drugs, devices, and procedures.

Quality and Relevance of Research and Related Activities at the Gorgas Memorial Laboratory: A Technical Memorandum—Examines the quality and relevance of activities at the Gorgas Memorial Laboratory.

Technology Transfer at the National Institutes of Health: A Technical Memorandum—Presents general information on biomedical R&D and its relationship to technology transfer, and on the processes of transferring medical technology and of assessing that technology.

Compensation for Vaccine-Related Injuries: A Technical Memorandum—Reviews the pros and cons of establishing a Federal vaccine injury compensation program.

SCIENCE, INFORMATION, AND NATURAL RESOURCES DIVISION

*Information Technology R&D: Critical Trends and Issues—Analyzes Federal policy, both directly by trends in R&D support and indirectly by tax, antitrust, regulatory, copyright, and education policy.

*Effects of Information Technology on Financial Services Systems—Examines technologies that are likely to be employed in delivering financial services in the future; the nature of the services that may be provided; and alternative structure of the financial services industry that may emerge as a result of applying new and existing technologies.

*Computerized Manufacturing Automation: Employment, Education, and the Workplace—Focuses on trends and the state of R&D in computerized manufacturing technologies over this decade; the development of industries producing computerized manufacturing equipment, software, and services; the potential utility of computerized automation for various categories of manufacturing industries that might use it; impacts on employment; implications for education and training; and analyzes the impacts of Federal policy options on the development and use of computerized automation systems in U.S. manufacturing.

*Informational Technology and its Impact on American Education—Identifies and projects relevant technology and R&D activity, and the providers and uses of curricula, and educational technology.

*Alternatives for a National Computerized Criminal History System—Assesses the use and operation of computerized criminal history systems by Federal law enforcement agencies.

*Implications of Electronic Mail and Message Systems for the U.S. Postal Service—Evaluates the impact

*Summary available.
of electronic message systems (EMS) on operations of the U.S. Postal Service and assesses alternative roles for the Postal Service in provision of EMS and services.

Patent-Term Extension and the Pharmaceutical Industry—Examines the benefits and efficacy of pharmaceutical innovation and research and development.

*Managing the Nation's Commercial High-Level Radioactive Waste—Presents the findings and conclusions of OTA's analysis of Federal policy for the management and disposal of commercial high-level radioactive waste.

*Protecting the Nation's Groundwater from Contamination—Provides comprehensive examination of the nature and extent of groundwater contamination.

*Acid Rain and Transported Air Pollutants: Technology and Public Policy—Examines the potential benefits of acting now to abate long-range transport air pollution and the potential costs of action.

*Wetlands: Their Use and Regulation—Presents the findings and conclusions of OTA's analysis of approaches to wetlands use.

*An Assessment of Maritime Trade and Technology—Traces prevailing conditions and dominant trends that are important to the way the Government assumes its responsibility in developing and implementing policy.

*Use of Models for Water Resources Management, Planning, and Policy—Examines the potential for mathematical models to more effectively and efficiently analyze water resource problems.

*Technology and Oceanography: An Assessment of Federal Technologies for Oceanographic Research and Monitoring—Identifies the technologies and management systems that are most effective in researching four areas: weather and climate, marine pollution, undersea mineral exploration, and fisheries.

Transportation of Liquefied Natural Gas—Evaluates the status and trends of ongoing and proposed projects involving the transportation and handling of liquefied natural gas.

Establishing a 200-Mile Fisheries Zone—Evaluates the problems and opportunities presented by the new 200-mile U.S. fishery zone.

Coastal Effects of Offshore Energy Systems—Assesses social, economic, and environmental impacts of three proposed offshore energy systems.

*Airport System Development—Assess the technologies to be applied to increase capacity or improve service at airports and the mechanisms by which the technology can be deployed.

Technology, Innovation, and Regional Economic Development—Identifies and describes the efforts of State and local governments, universities, and private sector groups to promote the creation, expansion, and retention of high-technology firms and industries.

Airport and Air Traffic Control System—Examines the likely future evolution of domestic aviation.

Civilian Space Policy and Applications—Explores Federal involvement in space, when and under what circumstances commercial involvement is appropriate.

*Global Models, World Futures, and Public Policy—A Critique—Examines global models as a tool for long-range strategic analysis and policy development.

*Impact of Advanced Air Transport Technology—Examines the impact of introducing or not introducing advanced high-speed aircraft into our future commercial fleet, including air cargo and commuter sectors.

*Impact of Advanced Group Rapid Transit Technology—Examines second-generation automated guideway transit systems as part of a solution to the need for improved urban mass transit.

Automatic Train Control in Rail Rapid Transit—Assesses technical, operational, planning, and policy issues arising from automated train control.

Changes in the Future Use and Characteristics of the Automobile Transportation System—Describes energy, environmental, safety, and cost impacts of technological changes.

*An Assessment of Technology for Local Development—Assesses several prototype technologies, the local problems they may alleviate, and their feasibility and potential impacts.

Salyut: Soviet Steps Towards Permanent Human Presence in Space: A Technical Memorandum—Examines the major past accomplishments, the current capabilities, and the probable future direction of the Soviet Union's Salyut space station program.

Space Science Research in the United States: A Technical Memorandum—Summarizes and critiques the views of many people interested in space science.

*Summary available.
Coal Exports and Port Development: A Technical Memorandum—Addresses four major issues that are important to Federal policy debate: estimating the potential U.S. coal export market, development of foreign trade policy, the Federal role in dredging harbors, and the outlook for alternative technologies.

Ocean Margin Drilling: A Technical Memorandum—Evaluates a proposed public-private cooperative research effort in marine geology.

Recent Developments in Ocean Thermal Energy: A Technical Memorandum—Reviews status of ocean thermal energy conversion (OTEC) developments occurring after OTA’s 1978 report on OTEC.
